

Enjoy a new level of comfort at home – while you save thousands of gallons of water

It's 6 am. You step into the bathroom, shivering as you start to brush your teeth. Then you quickly get undressed and jump into a steaming hot shower. You put your head under the water and sigh. You didn't have to let it warm up... your perfectly hot shower is ready for you in 30 seconds or less, any time you need it.

The amazing thing is that this higher standard of living pays for itself by saving the average family of four over 10,000 thousand gallons of water every year.

A big win all the way around

- **You'll never have to step into a cold shower again.**

How it works is easy. Turn on any hot water faucet in the house for just a second – turn it off – and the Faster Hot Water system into action. There are no buttons or timers involved. Just wait about 30 seconds and you'll have hot water at the tap – ready to go!

- **You're doing something good for the environment.**

You won't waste any water down the drain while you're waiting for the shower to heat up. With these savings you can instantly cut your water and sewage bill by 17.3% without any inconvenience. And, by cutting your bills, this solution actually pays for itself in under 2 years.

- **It doesn't run up your gas or electric bill.**

Some products give you the convenience of hot water on demand by burning an average of \$30 - \$40 in extra gas every month. These are grey technologies at best, not green. The Faster Hot Water system gives you true conservation along with convenience.

- **It's easy to install.**

You can have faster hot water in your house in an average of 1 hour. You don't have to solder any pipes or install any new electrical lines under the sink. Just snap it into your hot water line using Shark Bite™ fittings and you're all set.

- **It's so quiet.**

You don't have to worry about waking anyone up. In fact, you can barely hear it. It's out of the way and it works for years without any maintenance or problems. You'll only know it's there because you're saving money on your water bills every month.

Here's what our customers are saying

- I have tried Grundfos and recently installed a Laing thermostatically controlled pump. Neither have come close to their advertising. Your system is everything you say and more!

- Hank P., Panama City Beach, FL

- System working great, just as expected. I replaced a Chili Pepper. Much happier with your product. Ingenious that no switch required to activate pump. Can activate from any location in house.

- Ron J., Ponchatoula, LA

- The system is great and the pump starts and brings hot water to the faucets after momentarily turning on the hot water as advertised.

- Neal N., Lancaster, CA

I'm Mark Franklin, the inventor of the Faster Hot Water™ recirculation pump system.

I'm here to tell you that green isn't just good for the environment; it's here to improve your life.

Your house will be more comfortable. You're going to feel good knowing that you're doing something about our water problems. And, it even pays for itself.

An Innovation For Conservation

The **FASTER**HOTWATER recirculation pump

- Works with any kind of plumbing system, even if you have multiple dead end lines.
- Works with traditional tank style water heaters or tank-less.
- With 3 speeds, it provides optimum performance for any size house.
- It installs out of the way so it doesn't take up valuable storage space.
- It doesn't increase your gas bill and only uses about \$4 of electricity a year.
- Very quiet. It purrs softly like a cat.
- An easy, out of the way installation.
- Built tough. Stainless steel construction.
- 3-year manufacturer's warranty.
- No maintenance.
- International patent pending.

The Bridge Valve

- Installs under your sink in about 5 minutes and doesn't take up any space.
- Contains a heat sensate valve that shuts off when the water reaches 95 degrees, stopping the pump.
- If your house has 2 or more hot water branches, simply install one more inexpensive bridge valve – there's no need to buy an extra pump!

The Best Value On The Market

If you're looking for something **easy to install**, **simple to use** and **economical**...

The Faster Hot Water system™ wins hands down.

	Price	New electrical outlet	Total	Install	Saves water	Energy use	Activation	Location	Monthly operating cost	Annual operating cost	Shipping	Total first year expense	expense - water savings
FasterHotWater	\$ 347.00	\$ -	\$ 347.00	Easy	High	Low	Hot water faucet	Water heater	\$ 1.00	\$ 12.00	\$ -	\$ 359.00	\$ 125.00
